Our argument is the opposite. Things are unimpaired there and the biota is prospering, and is far from threatened or endangered. We need to protect places that are intact and not just those with species that are on the brink of extinction.

The answer to all of these is no. However, there are bird species of concern, which the state does recognize.

A question from a manager in OW:

Are any of the fish in the Bristol Bay Watershed on the federal threatened and endangered list?

Are there any species in the Bristol Bay watershed on the federal threatened and endangered list?

Does Alaska have a separate threatened and endangered species list?

Any insight?

Jeff
